

Hands-On Challenge: CloudFormation

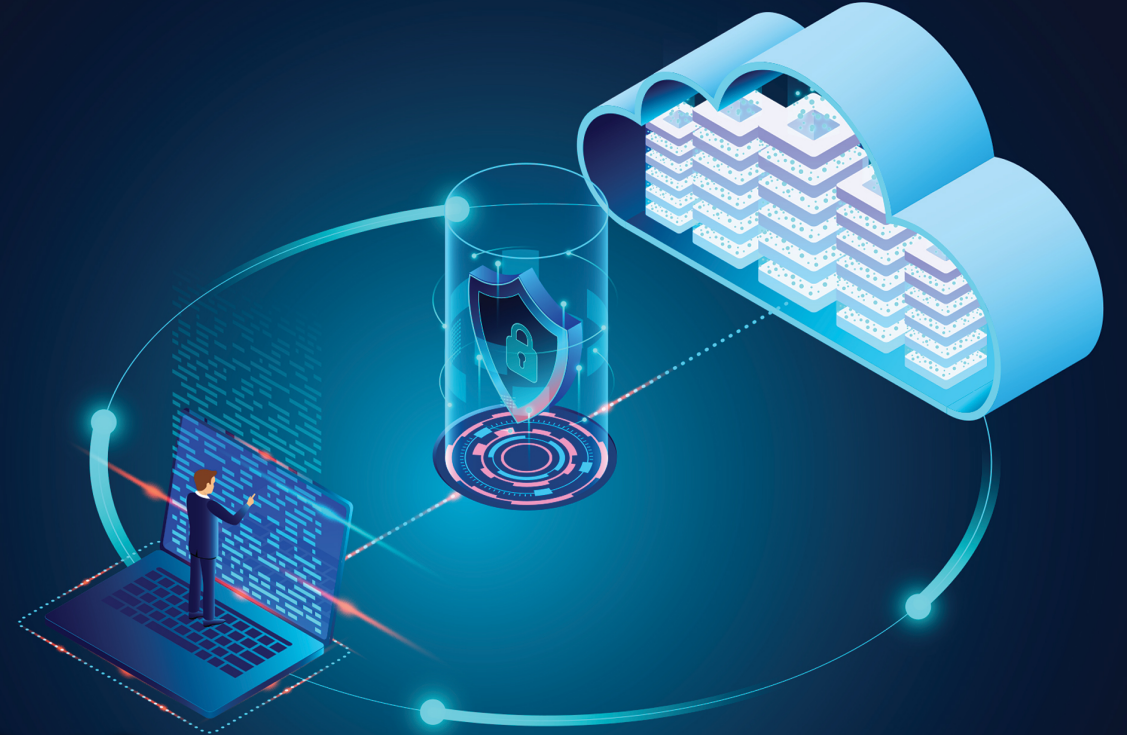

AWS Certified Solutions Architect - Associate (SAA-C02)

- Create a new Key Pair named **kp_sol_arch**
- Copy the **AMI ID** for the latest **Microsoft Windows Server 2012 R2 Base** image in AWS
- Create a new CloudFormation stack based on the Windows Active Directory sample template
- Use the following parameters:
 - Stack Name: **mystack**
 - DomainDNSName: **thisisit.local**
 - DomainNetBIOSName: **thisit**
 - KeyName: **kp_sol_arch**
 - RemoteModePassword: **Password123!**
 - SourceCidrForRDP: **0.0.0.0/0**
- Edit your stack in the designer and update the AMI ID for your region based on the value you copied
- Save and ensure the stack succeeds
- Test your AD and then delete your stack
